7 **SEC. 2. FINDINGS.**

8 Congress makes the following findings:

1 (1) The Department of Homeland Security's
2 Cybersecurity Education & Awareness (CE&A)
3 Branch was established under National Security
4 Presidential Directive–54/Homeland Security Presi-
5 dential Directive–23, which launched the 2008 Com-
6 prehensive National Cybersecurity Initiative. There
7 is no appropriations language that references CE&A;
8 it is funded through the Infrastructure Protection
9 and Information Security appropriation under the
10 National Protection and Programs Directorate.

11 (2) The Department of Homeland Security's
12 CE&A works with universities to attract top talent
13 through competitive scholarship, fellowship, and in-
14 ternship programs.

15 (3) The agency certifies of more than 125 insti-
16 tutions nationwide as National Centers for Academic
17 Excellence to teach students valuable technical skills
18 in various disciplines of Information Assurance.

19 (4) The CE&A prepares and makes available
20 computer and information security lesson plans. At
21 the K–12 level, the Department has partnered with
22 USA Today to provide lesson plans about the impor-
23 tance of prevention of computer and digital informa-
24 tion crimes at home and in the classroom.

1 (5) The agency initiated the IT Security Essen-
2 tial Body of Knowledge (EBK). The National Cyber-
3 security Division developed the EBK to establish a
4 national baseline of the essential knowledge and
5 skills that IT security practitioners in the public and
6 private sector should have to perform specific roles
7 and responsibilities.

8 (6) The challenge for computer and information
9 security coordination and development is no single
10 agreed upon voluntary taxonomy nor definitions to
11 rely upon when categorizing or classifying computer
12 or information security jobs.

13 (7) The fields of computer and information se-
14 curity study is within the field of information assur-
15 ance.

16 (8) The information assurance, cybersecurity
17 and computer security workforce encompasses a va-
18 riety of context, roles, and occupations and is too
19 broad and diverse to be treated as a single occupa-
20 tion or profession.

21 (9) Science, technology, engineering, and math-
22 ematics occupations, which include computer and in-
23 formation security experts and professionals, are ex-
24 pected to grow by 17 percent by the year 2018 com-
25 pared to 9.8 percent for other jobs.

1 (10) The Federal Government is experiencing a
2 shortage of qualified professionals with expertise in
3 computer and information security.

4 (11) Insufficiently trained, educated, or super-
5 vised Federal computer workers can reduce the Na-
6 tion's ability to secure computer networks from
7 cyber attacks or incidents.

8 (12) The computing and information security
9 workforce encompasses a variety of context, roles,
10 and occupations and is too broad an diverse to be
11 treated as a single occupation or profession.

12 (13) Computing and information security is not
13 solely a technical endeavor, and thus encompasses a
14 wide range of backgrounds and skills that will be
15 needed in an effective national computing and infor-
16 mation security workforce.

17 (14) The route toward professionalization of a
18 field of study can be slow and difficult, and not all
19 portions of a field can or should be professionalized
20 at the same time.

21 (15) It is essential, just as it is for other dis-
22 ciplines like medicine and the law, that academics,
23 employers, and government share a common lan-
24 guage to identify, train, educate, and employ com-
25 puter and information security professionals.

1 (16) The secure management of digital sensitive
2 information collected maintained or transmitted by
3 Federal Government agencies, including taxpayer
4 data, Social Security records, medical records, intel-
5 lectual property, proprietary business information,
6 and sensitive Government data vital to national se-
7 curity and national defense requires an educated and
8 well-trained, as well as supervised, Federal work-
9 force.

10 (17) It is in the Nation's interest to promote
11 opportunities for science and technology education
12 and employment as a means of addressing the need
13 to fill computer and information security jobs within
14 the Federal Government.

15 (18) The Department of Homeland Security's
16 role is to lead, champion, and sustain the develop-
17 ment of a national information assurance, cybersecu-
18 rity and computer security workforce, as well as to
19 educate the citizenry.

20 (19) Developing, implementing, and articulating
21 programs that protect against and respond to com-
22 puter and information security threats and hazards
23 to the Homeland's security.

24 (20) The Department of Homeland Security
25 must create an agile, diverse workforce and digital

1 citizenry that are capable of sustaining a safe, se-
2 cure, resilient computer and information security
3 space, driven by a dynamic Department organization
4 at the forefront of cross-sector computer and infor-
5 mation security workforce development.
